AM-AT 2-3-4 jaws

Combined chuck with manual continuous adjustment of the jaws and automatic clamping for small and medium productions

- Sizes from Ø 200 up to Ø 400 mm
- Universality of clamping
- Quickly clamping diameter changer
- Jaws concentricity in each radial location to within 0.03 mm

ROTOMORS TECHNOLOGY
The original since 1966
AM-AT 2-3-4 jaws-combined hand and power self-centering chuck

AM-AT is a combined hand and power operated self-centering chuck with 2-3-4 jaws for small and medium productions because it allows the manual approach of the jaws by means of the adjusting key, and the pneumatic or hydraulic clamping of the workpiece through pneumatic or hydraulic cylinder.

Equipment:
- 1 set of 3 hard & ground jaws for both OD and ID clamping
- 1 set of 3 hard & ground jaws for OD clamping only
- 1 set of hard & ground base jaws including soft top jaws
- adjusting key.

UNIVERSAL
It clamps any diameter workpiece, requiring only a simple turn of the key in one of the three pinions for quick, simultaneous and continuous radial adjustment of the jaws.

RAPID
Pneumatic or hydraulic cylinder control in closing and opening of the jaws.

PRECISE
Jaws concentricity in each radial location to within 0.03 mm.

POWERFUL
Continuous working-time action of the rotating cylinder provides an exceptional, consistent grip, which firmly secures the workpiece.
